

You'd jump through flames to save a life. Take five minutes to save your own.

While you're fighting a fire—and just before and after it—you have a 100 times greater risk of heart attack than most people. Like you, policemen, emergency medical technicians and others who are on the frontline in emergency situations are also at risk. Calcium Scoring—a simple CT scan that can “see” into your heart in just five minutes—can tell if you have a higher probability of a heart attack. A CT scan is the most accurate method to narrow down your risk. And St. Joseph's is the only health system in the state with two radiologists who are Level 3 readers—your assurance of an accurate diagnosis. Your heart can't tell you if there's trouble ahead. But we can. **To schedule your appointment at the St. Joseph's Ambulatory Imaging Center, 1135 Broad Street in Clifton, call 973.569.6300 today.**
